# USE CASE DESCRIPTION

## System Requirements Specification

---

### 1 PROJECT ABSTRACT

---

**Type Casting Operations** is a console-based Java application that demonstrates the usage of both implicit and explicit type casting. The program showcases how primitive types like `int` and `double` can be converted into one another, emphasizing the difference between automatic (implicit) and manual (explicit) type casting.

### 2 ASSESSMENT TASKS

---

1. Declare two variables of **different types** (e.g., `int` and `double`).
2. Perform **implicit casting** (e.g., casting an `int` to `double`).
3. Perform **explicit casting** (e.g., casting a `double` to an `int`).
4. Print out the results of the casting.

### 3 TEMPLATE CODE STRUCTURE

---

#### 3.1 PACKAGE: `COM.YAKSHA.ASSIGNMENT.TypeCastingAssignment`

##### Resources

Class/Interface	Description	Status
<b>TypeCastingAssignment</b> (class)	<ul style="list-style-type: none"><li>• Main class containing the logic to perform implicit and explicit type casting operations.</li></ul>	Need to be implemented.

## 4 EXECUTION STEPS TO FOLLOW

---

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) → Terminal → New Terminal.
3. This editor Auto Saves the code.
4. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
5. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
6. To run your project use command:  
**mvn compile exec:java**  
**-Dexec.mainClass="com.yaksha.assignment.TypeCastingAssignment"**
7. To test your project test cases, use the command  
**mvn test**
8. You need to use CTRL+Shift+B - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
